

**CERTIFICATE RELATED TO
PRODUCT DESIGN**

Concern	Dura Life for Food Applications
---------	---------------------------------

- The standard polyester Dura-Life filter media meets the applicable FDA regulations for use in dust filtration in dry food processing applications.
- The oleophobic finish is an additional fluorochemical treatment. Whilst this does not appear in the FDA register for direct food contact, this treatment has been extensively used in both the food and pharmaceutical industries for over 30 years.
- The epitropic fiber represented about 5% of the media content, and the fiber has a polyester core with a carbon impregnated outer coating which gives the media a grey color. Whilst this does not appear in the FDA register for direct food contact, the media has been extensively used in both the food and pharmaceutical industries for over 30 years.
