

HMK05 Protects Hydraulic Systems for End Dump Trailers

The HMK05 Duramax features a heavy-duty steel body and diecast top plate for added strength. Available in 8 different filter media.

CATCO, an authorized Donaldson distributor in the upper midwest U.S., found that fleets were constantly having head failures with low pressure spin-on filters when used for end dump applications.

CATCO's solution: The Donaldson HMK05 Duramax[®] filter. Although it's a spin-on, the HMK05 Duramax[®] is constructed to handle pressure spikes caused by flow surges up to 800 *psi* (5520 *kPa*), and oil flow up to 50 *gpm* (189 *l/min.*)

"It's a simple change" CATCO's Tom Nelson says, "but a very effective one. Our end dump customers no longer have trouble with filter head failures caused by flow surges and cold temperatures with this assembly."
