

The Breather Filter (BF) is designed to protect enclosures and devices from particles, water, oils, and other liquids without negatively affecting their operation. It is comprised of a filtration membrane and a pressure-sensitive adhesive ring for securing the filter to the device.

BENEFITS

- High efficiency particulate removal
- Venting of gases and pressure equalization
- Eliminates the need for costly hermetic sealing
- Repels water, oils, and other liquids
- Easy application and device integration
- Wide variety of standard sizes and materials available

STANDARD MATERIALS AVAILABLE

- The many options include ePTFE membrane, woven, nonwoven, and extruded materials such as nylon, polyester, polypropylene, and polyester/polyethylene. Hydrophobic, oleophobic, and acoustic materials are available.
- Thickness: < 0.3mm (< 0.012")
- Continuous Operating Temperature Range:
 - - 40° to 149° C (- 40° to 300° F)
- Minimum efficiency on 0.1 µm Particles: 99.97%
